DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 37-42, 43-48, 49-54, 55 and 56 is provisionally rejected on the ground of nonstatutory double patenting over claims 1-5, 6-10, 11-16 also 18-23 and 32 and 43 respectively against patented case 6,751,198.

This is a provisional double patenting rejection since the conflicting claims of the present applicant has not yet been patented. Both, the subject application and the patented case have claim languages that are phrased differently to claim the same subject matter, thus they are not patentably distinct from each other.

The subject matter claimed in the instant application is fully disclosed in the patented case referenced and would be covered by any patent granted on the instant application since the referenced patented case and the instant application are claiming common subject matter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 37-57 are rejected under 35 U.S.C. 102(b) as being anticipated by Larson.

Regarding claims 37, 38, 43, 44, 49, 50 and 55 Larson discloses a network device 120 (Fig. 1) for use in a network transmitting packets (see abstract and Fig 1) the device comprising:
a timer (col 8 lines 46-50);

a processor operable for setting a transmit bit in an outgoing packet and starting the timer when the transmit bit is set (see Fig 5a-5c and col 2 lines 47-60); and for reading a receive bit in a received packet and stopping the timer when the receive bit is read (see col 3 lines 1-25).

Regarding claims 39, 45, 51, and 56 Larson discloses means for reading and transmitting of bits within packets and time indication, (see Figs 5a-5c, col 9-10 and claims 15, 21 and 25).

Regarding claims 40, 46 and 57 Larson discloses a transmitting means for a voice packet, (see abstract and Fig 1).

Regarding claims 41, 47, 52, and 53 Larson discloses storing of time values (see col 11 line 20) and comparison of round trip delays to a predetermined value (col 3 lines 44-60).

Regarding claims 42, 48 and 54 Larson discloses the continued process of transmitting a third signal, and its determination of round trip delay, (see col 3 lines 1-25).
